

**Certified for the maximum  
180 minute fire rating.**

Tested in accordance with  
**UL 10C**

# Fire Rated Locks

Selected models from the CodeLocks Mechanical, Electronic and Smart Lock ranges have been tested in accordance with, and achieved, UL's 10C certification and hold a 3-hour fire rating.

It is very important to be sure that any products installed on fire rated openings have a fire safety certification. Many products may appear to be 'heavy duty' enough to use, however if they are not specifically fire rated, installing them on an opening which is fire rated will void the entire opening's compliance.

## KEY FEATURES

- Heavy duty locks
- Easy to install and operate
- Mechanical: Single code entry
- Electronic: Multiple code users
- Smart: RFID + multiple code users
- Key override as standard
- Code free access functionality
- Remote release options
